

POH SENG ZHUN

Senior Software Engineer | R&D | Backend & Distributed Systems | Java, Spring Boot, Kafka

Kuala Lumpur, Malaysia | pszhun90@gmail.com | [linkedin.com/in/pohsengzhun](https://www.linkedin.com/in/pohsengzhun) | pszhun.github.io

PROFESSIONAL SUMMARY

Senior Software Engineer with 12+ years of experience in Java backend development, distributed systems, and enterprise-scale platform engineering. Experienced in Java, Spring Boot, Kafka, MongoDB, Cassandra, Kubernetes, REST APIs, microservices, workflow orchestration, multi-tenancy, system integration, performance analysis, and production-like troubleshooting. Strong interest in R&D, backend platform engineering, distributed systems, system reliability, and AI-assisted engineering workflows.

ROLE FIT

Strong backend engineering background with Java, Spring Boot, REST APIs, microservices, distributed systems, and enterprise integrations.

Hands-on experience investigating Kafka consumer lag, event ordering, retry behaviour, MongoDB update flows, transaction conflicts, and throughput bottlenecks.

Comfortable working with international teams, product owners, architects, QA, DevOps, and cross-functional engineering stakeholders.

Experienced in workflow-driven systems, model-driven orchestration, testing support, automation tooling, and maintainable backend design.

CORE SKILLS

Backend	Java, Spring Boot, Spring Framework, REST APIs, SOAP Web Services, Microservices, Maven, JUnit, Mockito
Distributed Systems	Kafka, Event-driven Architecture, Message Processing, Retry Handling, Consumer Lag Analysis, System Integration
Databases & Data	MongoDB, Cassandra, MariaDB, PostgreSQL/MySQL exposure, Dynamic Queries, Bulk Updates, Performance Investigation
DevOps & Tools	Kubernetes, Docker, Helm, Jenkins, Linux, Git, Gerrit, JMeter, WireMock, Selenium IDE, JSON Schema, Camunda BPMN

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Nokia

Aug 2021 - Present | Kuala Lumpur, Malaysia

Design, develop, and enhance backend services for enterprise-scale telecom orchestration and order management platforms using Java, Spring Boot, Kafka, MongoDB, Kubernetes, Docker, and Linux.

Contribute across Order Management, Order Presentation, Generic Type Driver, Workflow Engine, and Model-Driven Framework components.

Designed and enhanced Jeopardy Management / Watchpoint alarm processing, including event-driven alarm state transitions such as Approaching, Missed, and Cleared.

Improved Kafka-based event processing reliability by analysing consumer lag, partition behaviour, event ordering, retry handling, and high-volume message processing.

Investigated and optimised MongoDB update flows, including dynamic queries, bulk updates, transaction conflicts, and performance bottlenecks under production-like load.

Implemented and enhanced multi-tenancy support, including tenant-aware headers, request propagation, validation behaviour, and broker-compatible message handling.

Supported model-driven orchestration capabilities, including workflow execution, capability class integration, asset packaging, version management, and external system integration.

Software Engineering Lead | AIA Malaysia

Mar 2021 - Jul 2021 | Kuala Lumpur, Malaysia

Supported software engineering activities for insurance-related enterprise systems, including application enhancements, issue analysis, and stakeholder coordination.

Worked with business and technical teams to clarify requirements, analyse system issues, and coordinate delivery of fixes and improvements.

Software Engineer | Nokia

Jan 2018 - Feb 2021 | Kuala Lumpur, Malaysia

Developed and maintained backend components for Nokia FlowOne / Digital Operations products within the R&D development team.

Worked on Java, Spring Framework, REST APIs, SOAP web services, CI/CD pipelines, Docker, Linux, automation tools, and Agile delivery activities.

Software Engineer | Comptel

Apr 2016 - Dec 2017 | Bangsar South, Malaysia

Developed and enhanced software components for telecom and service orchestration products before the organisation became part of Nokia.

Worked on backend development, integration, testing, deployment support, and technical documentation.

Software Engineer | Silverlake System Sdn Bhd

Jul 2012 - Apr 2016 | Kuala Lumpur, Malaysia

Developed and maintained web applications and REST services for investment and capital market systems.

Collaborated with business analysts and technical teams to implement features, prepare documentation, and support deployment activities.

SELECTED RECENT CONTRIBUTIONS

Jeopardy Management & Watchpoint Alarms: enhanced event-driven alarm state processing for order and order-item lifecycle monitoring.

Kafka Reliability Analysis: analysed consumer lag, partition behaviour, event ordering, retry handling, and high-volume message processing scenarios.

MongoDB Performance Investigation: investigated dynamic queries, bulk updates, transaction conflicts, and update-flow bottlenecks under load.

Model-Driven Orchestration: contributed to workflow execution, capability processing, asset versioning, and external system integration capabilities.

EDUCATION

Bachelor's Degree, Computer Software Engineering | Multimedia University | 2009 - 2012

Foundation Degree, Information Technology | Multimedia University | 2008 - 2009
