

POH SENG ZHUN

Senior Software Engineer | Java / Spring Boot | Backend & Distributed Systems | R&D

Kuala Lumpur, Malaysia | pszhun90@gmail.com | +60 12 669 3779 | linkedin.com/in/pohsengzhun

PROFESSIONAL SUMMARY

Senior Software Engineer with 12+ years of experience in Java backend development, distributed systems, enterprise platforms, and system integration. Currently working in Nokia R&D on telecom orchestration and order management platforms, with recent focus on Java/Spring backend services, Kafka event processing, MongoDB/Cassandra data handling, workflow orchestration, multi-tenancy, and reliability improvement. Strong fit for Java/Spring Boot microservices, API development, system integration, database design, testing, and performance optimisation within international product engineering teams.

CORE TECHNICAL SKILLS

Backend	Java, Spring Boot, Spring Framework, REST APIs, SOAP web services, Microservices, Maven
Distributed Systems	Kafka, event-driven processing, message ordering, retry handling, consumer lag analysis
Data	MongoDB, Cassandra, MariaDB, PostgreSQL, Oracle, dynamic queries, bulk updates, indexing concepts
Cloud / DevOps	Kubernetes, Docker, Helm, Jenkins, Linux, Git, Gerrit, CI/CD pipelines
Quality & Engineering	JUnit, Mockito, WireMock, JMeter, integration testing, code review, performance troubleshooting, workflow orchestration / BPMN exposure

SELECTED ENGINEERING STRENGTHS

- Design and enhance backend services for enterprise-scale platforms using Java, Spring-based frameworks, APIs, and integration patterns.
- Analyse Kafka-based asynchronous flows, including consumer lag, partition behaviour, event ordering, retry handling, and high-volume message processing.
- Investigate database and performance issues involving MongoDB update flows, dynamic queries, bulk updates, transaction conflicts, and bottlenecks under load.
- Work with workflow-driven systems and model-driven orchestration concepts, with exposure to BPMN-style process execution and backend integration.
- Collaborate with product owners, architects, QA, and cross-functional teams in international engineering environments.

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Nokia Services and Networks Malaysia

Aug 2021 - Present | Kuala Lumpur, Malaysia

- Design, develop, and enhance backend services for enterprise-scale telecom orchestration and order management platforms using Java, Spring Boot, Kafka, MongoDB, Kubernetes, Docker, and Linux.
- Contribute across Order Management, Order Presentation, Generic Type Driver, Workflow Engine, and Model-Driven Framework components in Nokia Digital Operations R&D.
- Designed and enhanced Jeopardy Management / Watchpoint alarm processing, including event-driven state transitions such as Approaching, Missed, and Cleared.
- Improved Kafka-based event processing reliability by analysing consumer lag, partition behaviour, event ordering, retry handling, and high-volume processing scenarios.
- Investigated and optimised MongoDB update flows, including dynamic queries, bulk updates, transaction conflicts, and performance bottlenecks under production-like load.
- Implemented multi-tenancy capabilities involving tenant-aware headers, request propagation, validation behaviour, and broker-compatible message handling.
- Supported workflow and model-driven orchestration capabilities, including workflow execution, capability class integration, asset versioning, and external system integration.
- Built automation scripts, test support utilities, and operational tooling for debugging, performance analysis, lab validation, and regression testing.

Software Engineering Lead | AIA Malaysia

Mar 2021 - Jul 2021 | Kuala Lumpur, Malaysia

- Supported software engineering delivery for insurance-related enterprise systems, including application enhancements, issue analysis, and stakeholder coordination.
- Worked with business and technical teams to clarify requirements, analyse system issues, and coordinate delivery of fixes and improvements.

Software Engineer | Nokia / Comptel Communications Malaysia

Apr 2016 - Feb 2021 | Kuala Lumpur, Malaysia

- Developed and maintained backend components for Nokia FlowOne / Digital Operations telecom orchestration products within R&D development teams.
- Worked on Java, Spring Framework, REST/SOAP integrations, CI/CD pipelines, Docker, Linux environments, automation tools, testing, documentation, and release support.

Software Engineer | Silverlake System Sdn Bhd

Jul 2012 - Apr 2016 | Kuala Lumpur, Malaysia

- Developed and maintained web applications and REST services for investment and capital market systems, including Portfolio Account Management Portal and RHB TradeSmart.
- Worked with business analysts, technical leads, and development teams on feature implementation, testing, deployment, documentation, and customer-facing technical support.

Trainee | AGTIV Consulting Sdn Bhd

Apr 2012 - Jul 2012 | Petaling Jaya, Malaysia

- Assisted software development and testing activities using Microsoft technologies, including ASP.NET and MSSQL.

EDUCATION

Bachelor Degree in Information Technology (Hons), Software Engineering - Multimedia University, Cyberjaya

Foundation in Information Technology - Multimedia University, Malacca

CERTIFICATIONS & TRAINING

SAFe Scrum Master Course (4.5) | Java Standard Edition 7 Programming | IBM DB2 Database Fundamentals | Microsoft Technology Associate: Web / Windows Development Fundamentals

ROLE FIT FOR International Engineering Team / DANICA

- Relevant to Java 17+ / Spring Boot backend development, microservices, API development, system integration, database design, code review, testing, and performance optimisation.
- Experienced in international R&D collaboration, enterprise-scale backend systems, workflow-driven platforms, and reliability-focused engineering practices.
